

Darkan Primary Excursion

Green Wind Renewables and the Ambrosia Wind Farm project sponsored the Darkan Primary School's end-of-term excursion to the Gravity Discovery Centre at Dalyellup, with funding provided to ensure the entire school could take part.

The trip celebrated the students' outstanding demonstration of the school values of initiative, consideration, and excellence throughout the year. With support from the Community Sponsorship Program, the whole school was able to come together to learn, explore and be rewarded for their efforts.

Green Wind Renewables is pleased to have helped make this memorable experience possible and congratulates Darkan Primary School students on their achievements.

Motherland Event

Green Wind Renewables was delighted to support the Motherland event in Darkan on Sunday 21st September 2025, celebrating the strength, resilience, and achievements of rural women.

Held at the Darkan Town Hall, the event brought together women from across the region marking the first time Motherland has come to Western Australia.

The day featured Motherland Founder and CEO, Stephanie Trethewey, who hosted a panel with three inspiring local mums – Shenai Johnson, Louise O'Neill and Tracey Angwin. Together, they shared their personal stories and experiences of motherhood in rural and regional communities, highlighting both the challenges and the joys of raising families in rural environments.

The event provided a warm and supportive space for connection, storytelling, and celebration, giving attendees the chance to reflect on the vital role women play in the heart of rural Australia.

Green Wind Renewables values the opportunity to partner with initiatives like Motherland that empower and celebrate rural communities, and we congratulate everyone involved in making the Darkan event such a success.
